OVERVIEW

General POS

General POS connects the retail counter and back office. Cashiers can look up items, build an order, and print a receipt. Managers use the same records to review sales, monitor stock, and decide what to reorder.

It fits stores that want to track customers, supplier orders, and operating costs alongside sales. Online-store and kitchen tools are available when enabled for the business.

Key features

Checkout and receipts Scan or search for products, apply discounts, and print receipts.

Product inventory Maintain SKUs, barcodes, prices, and stock levels.

Purchasing Keep supplier records and manage purchase orders.

Sales reporting Review transactions, expenses, and sales summaries.

Customers and quotations Look up customer records and prepare quotations for orders that need a price review before checkout.

Online store and orders Where enabled, manage the online catalog, storefront settings, and incoming online orders.

Staff, attendance, and kitchen Review attendance and staff records. Use the kitchen workspace for order preparation when enabled.

Access levels

Owner and administrator Manage business settings and staff accounts, and oversee inventory, sales, purchasing, and reports.

Manager Run daily store operations, review orders and expenses, and use inventory and reporting tools for the assigned business.

Cashier Use POS, review available transactions, and work with customer records and quotations.

Purchasing, warehouse, and other staff Purchasing officers work with suppliers and purchase orders. Warehouse staff have purchase order access. Kitchen and attendance tools depend on the assigned role and enabled modules.
